PAYSYS

We aspire to be the LEADING PROVIDERS of INNOVATIVE AND IMPACTFUL SOLUTIONS that solve diverse and complex problems in the DIGITAL PAYMENTS and FINANCIAL SERVICES Sectors the World Over.

# Open Card Management System

The Future of Card Management is here

CARD MANAGEMENT SYSTEM OVERVIEW

Card Management System Introduction

Open CMS is a robust, scalable, and highly flexible solution designed to empower financial institutions with seamless card lifecycle management. From issuance to activation, transaction processing, and security controls, Open CMS supports multiple card types, including debit, prepaid, and virtual cards.
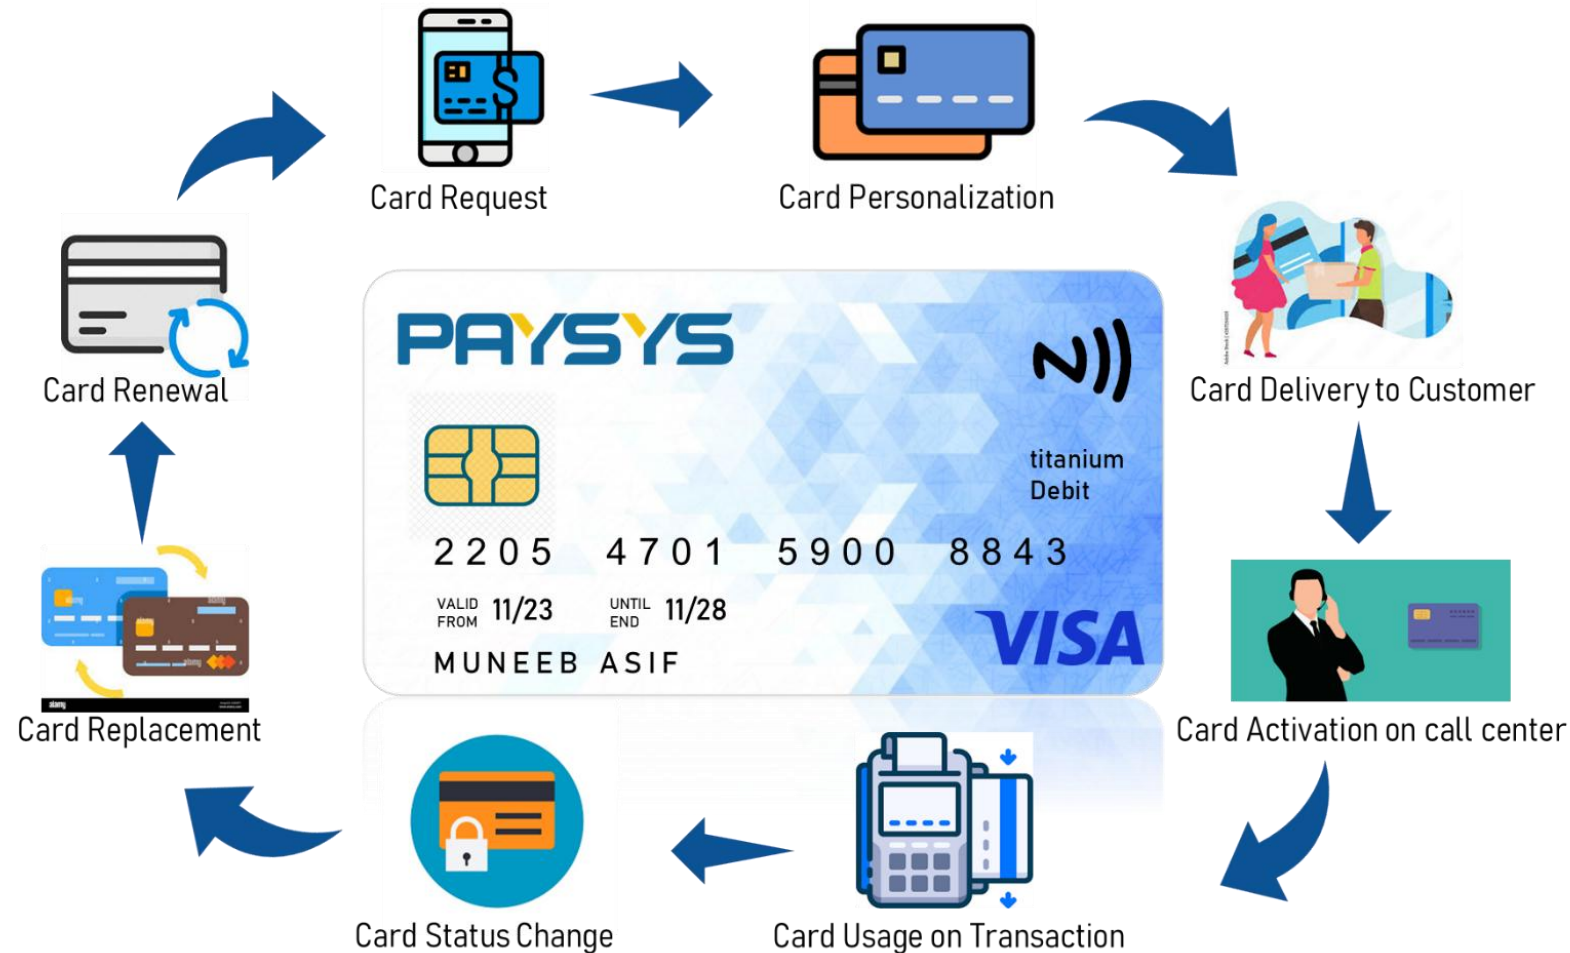

Card Management Overview

Card Life Cycle Management

Open CMS Back Office by Paysys Labs is a robust platform for end-to-end card management. It supports card issuance, personalization, PIN generation, transaction monitoring, and lifecycle management. With bulk processing, role-based access, and advanced reporting, it ensures secure, efficient, and compliant operations for financial institutions.

Card Management Overview

Card Type

Open CMS supports the issuance of EMV Contactless, Contact Chip, and Magnetic-Stripe Cards, catering to diverse card programs. Cards can be issued through batch processing for bulk issuance and individually from the Open CMS Back Office. Customers can also request physical cards and create virtual cards directly from the app UI. During this process, client demographic details are added, and prepaid cards are created seamlessly. Additionally, the system supports both physical and virtual cards
